
Todo's

Posted by Steffen Brinkmann - 2007/04/20 16:32

Hi everybody!

I'd like to start this thread in order to gather ideas of how to enhance this page.

My ideas are the following:

1.- Complete the list of codes and Visualisation tools. On each codes page we could join small scripts and programs in any language (bash, c, fortran, python, whatever you have) that do small tasks of an analysis etc. specially for that code-data. I will start that these days with my NIRVANA and pluto scripts. May they be helpful!

2.- Let's make the weblinks section a "yellow pages" for CFD! You can submit weblinks too!

3.- A Gallery of testproblems or fancy simulations, we have done.

Another thing I'd like to adress is the news section. so far I put 4 categories: Codes, Conferences, Interna, Other. (By the way: guess what, you can submit news!) Is that reasonably?

Comments? Any other ideas?

cu, Steffen

Hi everyone,

First of all i agree with Steffen's comments.

Second, i have one more suggestion. We can all of us put our just accepted publications. That way we can be familiar with the current status on simulations on a subject. It is certainly much more efficient than searching on the net, or attending conferences. Besides, this is good for the authors too, since it will probably give them more citations.

cu,
t

Hi!

I put a new news category called "Publications" in the news section. Every registered user is invited to post his/her publication or other publications that he/she finds interesting there. Here's how:

log in, click on "Submit News" in the User Menu at your left, paste the title of the publication as the title of the news, select "Publications" from the category selector, put a link (ADS, astro-ph, your website...) as "Intro Text" and the abstract as the "Main Text" of the news.

Click on the Disc symbol to save the changes. As soon as I check my Email, I will see there's new news, check them and click the "Publish" button. That's why it will last up to one day until your news appears on the website.

bye, Steffen

ps: the other news sections work just the same, so announce your conferences, meetings, workshops, new code versions, yourself ;)
