You are very welcome to visit and to make use of the "Astrophysics Software Database" [ASD]: [www.mpia.de/ASD](http://www.mpia.de/ASD)

You are invited to announce your software projects here in order to make your work "visible" to the entire astronomical community. This concerns data reduction and analysis software, simulation codes, databases, instrument software, software lists, etc. .

The long-term goals of the ASD are

- To foster the communication between developers and users of astrophysical software (e.g., modelers and observers) and
- To provide an overview about existing software solutions in the community.

The ASD is cross-linked with the Smithsonian/NASA ADS. Thus, you can make use of the numerous options provided by the Smithsonian/NASA ADS (very flexible search, bibtex entries, opportunity to distribute the link to your ASD record, etc.).
